

AI-FIRST BANKING

ATLAS

A clearer path from card question to a verified next step

Credit-card product information, simulated eligibility, and human-review handoff in Spanish and Portuguese.

FACTORED HACKATHON 2026

Atlas · Lucas Wolff

Working prototype · Team-created offers and fictional public fixtures

01 / THE CUSTOMER PROBLEM

Help a prospective card customer decide with confidence

A customer can ask natural questions, compare cards, request a simulated precheck, or ask for a person.

Goal: answer prospective card questions with grounded facts, then verify every action the agent claims it took.

SUPPLIED DATA / WHY WE USE IT

1 Campaigns + sends

MARKETING_CAMPAIGNS + CAMPAIGN_SENDS: 52 generic credit campaigns; interest and entry context, not sales.

3 Service agents + transcripts

SERVICE_AGENTS: language-based mock routing.
CALL_TRANSCRIPTS: Spanish tone, not facts.

2 Customers + products

CUSTOMERS + PRODUCTS: local scenario profiles, country, score, income estimate, and existing holdings.

4 Team-created demo assets

Four offer terms, synthetic policy, fictional public fixtures, new chat events, and mock application/handoff records.

Evidence boundary: 1.75M sends and 97.8K clicks cover all supplied campaigns; neither proves card acquisition or chatbot demand.

02 / WORKING EXPERIENCE

A real conversation in Spanish

Captured from the deployed judge app on 3 October 2026 · Rewards campaign · México · fictional fixture P02

*

¡Hola! Veo que te interesó la tarjeta Rewards. ¿Qué te gustaría saber sobre ella?

¿Qué beneficios tiene esta tarjeta?

U

*

La tarjeta Rewards te da 1 milla por cada unidad en USD equivalente de tus compras minoristas con tarjeta, descontando cualquier reembolso vinculado. Además, incluye 2 visitas de cortesía a salas VIP por año de tarjeta y cobertura de gastos médicos de emergencia de hasta USD 20,000 por viaje cubierto. Estos beneficios de viaje están sujetos a activación. ¿Quieres que te explique algo sobre comisiones o tasas?

Sources: BENEFIT.REWARDS

¿Cuántas visitas a salas VIP incluye?

U

*

La tarjeta Rewards incluye 2 visitas de cortesía a salas VIP por año de tarjeta para el titular principal. Si llevas un invitado, esa visita se descuenta del mismo cupo de 2, no de uno aparte, y las visitas no utilizadas no se acumulan para el siguiente año. El acceso depende de disponibilidad de espacio en la sala participante.

What this shows

Maintains the selected card

Answers a follow-up

Displays source fact IDs

Live output; not a script

03 / HOW IT WORKS

Claude routes and answers; the service controls actions

A bounded intent choice comes before service-owned policy, consent, and durable outcomes.

Boundaries: no private profile in model requests · secrets in AWS SSM · sanitized CloudWatch logs · no bank write

04 / MEASURED BEHAVIOR

87 automated tests passed; 7/8 live flows met expectations*

Current 4 October build · agent-run production smoke checks.

1 Product facts + context

Benefits and monthly fee came together with citations. 'This card' kept Horizon across turns. A comparison against Summit returned lower-cost options.

2 Intent + consent

A new application request reached card-specific consent. An unnamed other card prompted a card choice. Precheck decline led to a separate application choice.

3 Profile + service boundaries

Student suggestion named the selected demo profile and its unverified enrollment. Cancellation got a support path; a second application got the one-per-chat rule.

4 Dated evidence + capacity

Current build: 87 local tests; 7/8* live smoke flows. Earlier rehearsal: 12 entry paths, 3 application read-backs, 24 HTTP requests from six visitors.

* After Rewards and Summit, 'a cheaper one' (PT: 'um mais barato') did not trigger a question about the reference card.

It listed alternatives; a separate 'cheaper than Rewards' answer even included the more expensive Summit.

Separate, noncumulative checks · 400 model attempts/day cap

05 / PATH TO A REAL SERVICE

What changes before a customer can rely on it

The prototype proves a workflow; a banking deployment needs approved data, live operations, and independent validation.

1 Approved products + policy

Replace demo offers and thresholds with governed, versioned bank terms and credit policy; legal review.

2 Identity + data permissions

Real customer authentication, consent, current account data, ownership checks, and retention controls.

3 Live human service

Agent availability, queue ownership, employee inbox, reply in the same chat, SLA, and escalation outcomes.

4 Quality + operations

Independent bilingual held-out evaluation, security testing, capacity/cost budgets, monitoring, and support.

Now: a working, public judge prototype with verified simulated actions.
